

Management of all metrology services for a client

#Challenge

Full **outsourcing** of Calibration Services.

#Response provided

Trescal carried out an audit of all the Company's Metrology activities in order to meet **their needs for measurement quality** and **responsiveness** in conducting tests.

This enabled Trescal to assess their **real needs** and **to adapt the support accordingly**.

Due to the requirements for the availability of testing equipment and testing methods, Trescal set up **on-site service campaigns** for all of the measurements in question, which included: electrical, temperature, pressure, and flow measurement as well as force, accelerometry and mechanical.

Additionally, Trescal **deployed its calibration assets management software** to track Client measurement instruments in real time.

This allowed the client **to concentrate** its attention on their **core business**, and **their metrology costs were optimised**.
